

π_0: $\triangle(O, A, P)$ of scale fM minus the corner (P, P_2, P_3) of scale et

π_5: $\triangle(X_4, U_1, P_2)$ of scale $u_1 = fq - et$ minus corner (X_4, C', U_2) of scale $u_2 = fq - er$

π_2: $\triangle(P_3, P_2, Q)$ of scale ft

π_4: parallelogram, sides as_1 and cx, $x = ft - eq$ (angle β)

π_1: $\triangle(O, B', C')$ of scale $v = fM - er$

π_3: $\triangle(R, Q, V_2)$ of scale $s_1 = f(r - t)$ minus corner (R, B, B') of scale $s_2 = fr - eM$

$n = \lfloor eM/f \rfloor$, $t = n - \delta$ ($\delta = 1$ if $f \mid eM$, else 0), $r = n + 1$, $q = n$.
Counts of $\pi_0, \ldots, \pi_5$: $f^2M^2 - e^2t^2$, v^2, f^2t^2, $s_1^2 - s_2^2$, $2s_1x$, $u_1^2 - u_2^2$;
sum $= M^2(2f^2 - e^2)$.
