

0 $\triangle_{OAP}$ of scale fM minus corner of scale et: $f^2M^2 - e^2t^2 = 364$

1 triangle $OB'C'$ of scale $v = fM - er$: $v^2 = 121$

2 triangle of scale ft: $f^2t^2 = 100$

3 triangle of scale $s_1 = f(r-t)$ minus corner of scale $s_2 = fr - eM$: $s_1^2 - s_2^2 = 16$

4 parallelogram $as_1 \times cx_7$, $x_7 = ft - eq$: $2s_1x_7 = 40$

5 triangle of scale $u_1 = fq - et$ minus corner of scale $u_2 = fq - er$: $u_1^2 - u_2^2 = 15$

$t = n - \delta,\ r = n + 1,\ q = n,\ n = \lfloor eM/f \rfloor$ ($\delta = 1$ if $f \mid eM$, else 0) here $(M, n, t, r, q) = (4, 2, 2, 3, 2)$ total $= M^2(2f^2 - e^2) = 656$
