**Tile** $(a, b, c) = (ef,\ f^2 - e^2,\ f^2)$

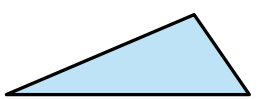

$a, b, c$ lie opposite $\alpha, \beta, \gamma$

$\alpha + \beta + \gamma = \pi, \quad \mathbf{3}\alpha + \mathbf{2}\beta = \pi$

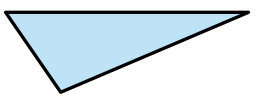

$$\cos\alpha = \frac{2f^2 - e^2}{2f^2}$$

Drawn: $(e, f) = (2, 5)$, tile $(10, 21, 25)$,
$\alpha \approx 23.1°,\ \beta \approx 55.4°,\ \gamma \approx 101.5°$
